

# SUMMIT™

single-use arthroscope

## Introducing Summit™ – the world's first **4K single-use arthroscope.**

### **Efficient**

Simple surgical set-up

Automated inventory management

### **Consistent**

A new 4K image, every time

Predictable transparent pricing

### **Safe**

Sterile and ready to use

Reduced risk of staff exposure to contaminated instruments

## **Simplifying endoscopy**

# Why single-use?

## Conventional surgical visualization is complex, expensive, and difficult to maintain.

Dirty or damaged endoscopes, bad light cables, and underpowered, old cameras can negatively affect visualization, disrupt workflow, and present unnecessary safety risks to the operating suite. Hidden costs in the form of service contracts, repairs, and sterilization services negatively impact the bottom line.

### Current Solution

**\$100K+** capital expense for new equipment

**\$\$\$** substantial service, repair, and maintenance expense

**\$\$\$** costly 35 step sterilization process

**\$0** capital expense

**\$0** service, repair, and maintenance expense

**\$0** zero reprocessing

The Summit single-use arthroscope is designed to remove inefficiency, variability, and safety issues from the surgical suite – **reducing per procedure cost by 30-40%.\***
